[www.tourjavavolcano.com](https://tourjavavolcano.com)

Ijen Crater is the only crater in Indonesia which has a natural phenomenon "blue fire". In the world, there are only two places that have the Blue Fire. In addition to Indonesia, there is also a blue fire in Iceland. Blue fire is happening because of the heat of the crater of Ijen combined with sulfur to create the effect of blue flame on the surface. This phenomenon can only be seen before sunrise. Trekking to the summit of Mount Ijen to see blue fire began at midnight (Ijen open gate: around 01.00 – 01.30 Am.)

At sunrise, tourists can see clearly Ijen Crater Lake. Lake formed from a volcanic eruption about 2500 years ago, has turquoise water. So beautiful. Ijen Crater Lake is a lake that has a high acidity, and is the largest volcanic lake in the world. With a depth of up to 200 meters and an area of more than 5000 hectares.

The best time to climb Mount Ijen is in the dry season, around July to September, when the early morning until the morning. Because, the blue fire appears shyly during the rainy season. Meanwhile, during the dry season mount Ijen's blue flames tend to be bigger and the mountain path is dry sand, so it's not slippery and safer for visitors.
